SUMMARY

Full-stack software engineer building and shipping production features for an AI-powered learning platform. Works across React.js, Node.js, MongoDB and AWS Lambda, with a focus on clean REST APIs and user-facing product features. M.Sc. Integrated IT graduate, Anna University (2026).

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Python, C++, SQL
Frontend: React.js, HTML5, CSS3, Tailwind CSS, Material-UI, Vite, Chart.js, Ag-Grid
Backend: Node.js, Express.js, RESTful APIs, Mongoose, authentication (Google sign-in)
Databases: MongoDB, MySQL
Cloud and tools: AWS Lambda, Docker, Git, GitHub
Core concepts: Full-stack development, REST API design, data structures and algorithms, agile

EXPERIENCE

Software Engineer | Log2Base2, Chennai (on-site) Jul 2026 – Present

- Built Ask Doubt AI, an AI doubt-solving assistant for Leyaa.ai, an AI-powered adaptive learning platform: conversation history, thread continuation and responsive light and dark UI; tested usage limits end to end before release.
- Shipped 8+ features to production between July and October 2026 across the React.js frontend and Node.js / MongoDB backend, including Verified Profile (view count, verification indicators, sharing), an Exit Test flow and in-app issue and question reporting.
- Built a Goal Share popup with per-goal tracking APIs that prompts LinkedIn sharing after test completion, and social-preview (OG) images for shared profile links.
- Developed the learning and test flows for the Interview Preparation product: a multi-subject test engine with APIs, subject, topic and pattern levels, and a Goal Dashboard.
- Fixed compiler-service bugs in execution error reporting, exit-code handling and the test harness.

Full-Stack Developer Intern | Log2Base2, Chennai (on-site) Jan 2026 – Jun 2026

- Joined as an intern and worked on Leyaa.ai across frontend, backend, cloud services, databases, APIs and production deployments; converted to a full-time Software Engineer after six months.

Full-Stack Developer Intern | Ablelyf, Doha, Qatar (remote) Jul 2024 – Dec 2024

- Built and deployed RESTful APIs for scalable web applications, connecting front-end and back-end systems.
- Contributed to three product launches.

PROJECTS

Adaptive DSA Coach | React, Vite, Monaco Editor, Node.js, Express, MongoDB, Docker, Judge0 | GitHub

- Building an adaptive data-structures practice platform with its own code editor and run flow; learner code runs in a self-hosted Judge0 sandbox under Docker.
- Grades how a learner solves a problem, not only pass or fail: hidden tests, a mistake classifier, and per-concept Elo skill ratings that choose the next problem.
- Includes accounts with Google sign-in, consent and delete-my-data flows, and API rate limiting.

ProShop – E-commerce Platform | MERN stack, Tailwind CSS, PayPal API | GitHub

- Built a full-stack store with product browsing and PayPal checkout, plus an admin panel to manage products, users and orders.

Event Management and Booking Platform | MERN stack, Tailwind CSS

- Built a platform where vendors list venue, catering, photography and decoration services and users book them; vendors accept or reject bookings, and confirmed events can be published to a public dashboard.

Student Dashboard | React.js, Tailwind CSS, Chart.js, Ag-Grid | GitHub

- Built an analytics dashboard with interactive charts for GPA trends, CGPA and attendance, with performance comparisons and progress tracking.

EDUCATION

M.Sc. Information Technology (Integrated) | College of Engineering Guindy, Anna University Dec 2021 – Apr 2026
CGPA: 7.41

Sri Krishna Matriculation Higher Secondary School | HSLC 95.3%, SSLC 92.2%

LEADERSHIP

Technical Lead, Mathirx'25 Math Colloquium, CEG (Sep 2024 – Mar 2025): led development and launch of the event website and directed the team using agile practices.
Techops Organizer, CEG Tech Forum (Aug 2023 – Feb 2024): part of the team that built the Kurukshetra 2024 website in React.js.
